

How to use your Elixinol™ X-Pen

- ① Remove Cap from X-Pen. This will expose the silicon tip.
- ② At opposite end (dark purple), simply unlock X-pen by twisting the twist-lock slightly. This enables the pen to depress further and dispense the oil.
- ③ When done, twist the twist-lock once again to place the pen back into the locked position. Place clear tip back over silicon tip.

Notes:

- Store the X-Pen away from direct sunlight, heat, or humidity.
- Refrigeration is not necessary. If refrigeration is preferred, please allow time for material to reach room temperature before dispensing.
- In the rare instance that an issue arises with dispensing oil from the X-Pen, place in warm to hot water with cap on. This will increase the fluidity of the oil and the X-Pen should function normally.
